

This Week's Water Conditions Update

July 15, 2022

Water Conditions Tracker

Lake Okeechobee Levels & Caloosahatchee Flow Impacts

On 7/13/22 Lake Okeechobee was at 12.99 feet, increasing by 0.11 feet in the past week. The weekly average flow at S-79 was 1,291 cfs (cubic feet per second) and flow from the Lake at S-77 was an average of 0 cfs. The 14-day average flow on 7/6/22 was **1,381 cfs** and has been in the optimal flow envelope (750 - 2100 cfs) for 18 days.

For more information on Lake Okeechobee and estuary conditions go to the latest [Caloosahatchee Conditions Report](#)

Virtual Water Quality Tour from Lighthouse Beach

[Click here](#) or on the image above to take a virtual tour from above Lighthouse Beach Park to see how the water looked this week.

Photo was taken on 7/11/22 at 1:19 PM on a falling tide (Low tide @ 6:52 PM (-0.52ft)).

Red Tide

[Satellite imagery](#) over the past week has not detected any blooms off the coast of Southwest Florida.

On 7/1/22, the FWC reported that the red tide organism, *Karenia brevis* was observed at background concentrations in one sample from Northwest Florida over the past week. In Southwest Florida over the past week, *K. brevis* was not observed.

In the past week (7/5 – 6/11), the CROW wildlife hospital on Sanibel received 1 toxicosis patient: 1 anhinga (died).

Blue-Green Algae

On 7/11/22 sampling for cyanobacteria by the Lee County Environmental Lab reported the **presence** of *Planktothrix*, *Dolichospermum*, and *Limnospira* at the **Alva Boat Ramp** as yellow-green scum along the shore and ramp and *Microcystis* at the **Davis Boat Ramp** as sparse specks.

Blue-green Algae Toxin status
Jun 14,2022 to Jul 13,2022
(Presence/Absence)

- Toxin Present
- Toxin Not Present
- No Data

Blue-green Algae sampling results for the last 30-days for the 10 county area (Lee, Collier, Hendry, Glades, Okeechobee, Martin, Palm Beach, Broward, Miami-Dade and Monroe). Data from FDEP Blue-green algae dashboard

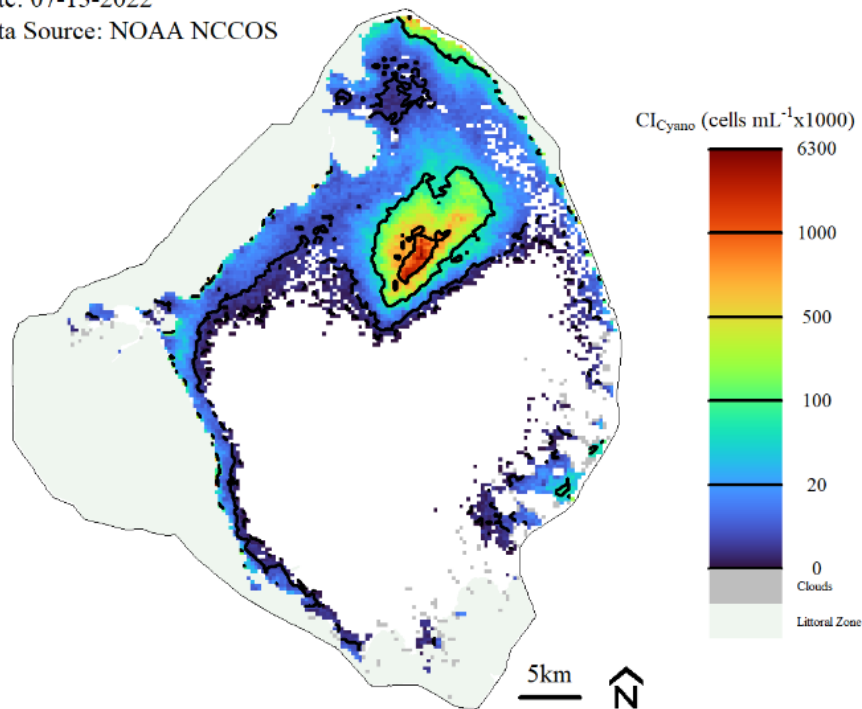

Data are provisional and subject to change.

Data from the [FDEP blue-green algae dashboard](#) reported 93 samples collected over the past 30 days for the 10 county area. 24 samples had toxins present ranging from 0.11 to 180 µg per L which is **above** the EPA recommended standard for recreational waters (8 µg per L).

On 7/13/22, [satellite imagery](#) from Lake Okeechobee showed moderate bloom potential in the Western and Northern shores of the lake and elevated bloom potential in the offshore areas in the Northern part of the lake. Overall, algal blooms covered about 204 square miles (29%) of the Lake.

Date: 07-13-2022

Data Source: NOAA NCCOS

Cyanobacteria Algal Index across Lake Okeechobee. Data from NOAA NCCOS HAB data explorer.

Data are provisional and subject to change.

Become a Citizen Scientist and Get the Algae Reporting App Today!

SCCF wants to know when and where all types of algae sightings occur to monitor conditions around the islands and to investigate algae bloom occurrence with patterns in seasonal weather changes and Lake Okeechobee water management practices.

Download the algae reporting app on your phone by [clicking here](#) or by searching for the ArcGIS Survey123 app in the app store. Once installed, give the app permission to access your phone's location to receive GPS coordinates of your sighting and camera/media to capture and attach pictures. When you open the app, click "Continue Without Signing In."

Next, download the algae reporting survey by scanning the QR code above or [clicking here](#) on your phone. Once the survey is downloaded, fill out the required fields and click the check mark in the lower right corner to submit your sighting. Note: If you do not have cellular coverage, you can still fill out the survey and save it in the outbox to be sent later. [Click here](#) to download instructions.
