

This Week's Water Conditions Update

September 9, 2022

Water Conditions Tracker

Lake Okeechobee Levels & Caloosahatchee Flow Impacts

On 9/7/22 Lake Okeechobee was at 12.51 feet, decreasing by 0.06 feet in the past week. The weekly average flow at S-79 was 2,784 cfs (cubic feet per second) and flow from the Lake at S-77 was an average of 0 cfs. The 14-day average flow was **2,653 cfs** and has been in the damaging flow envelope (>2,600 cfs) for 1 day.

For more information on Lake Okeechobee and estuary conditions go to the latest [Caloosahatchee Conditions Report](#)

Virtual Water Quality Tour from Lighthouse Beach

[Click here](#) or on the image above to take a virtual tour from above Lighthouse Beach Park to see how the water looked this week.

Photo was taken on 9/6/22 at 12:16 PM on a low tide (Low tide @ 1:04 PM (0.174ft)).

Red Tide

[Satellite imagery](#) over the past week has not detected any blooms off the coast of Southwest Florida.

On 9/2/22, the FWC reported that the red tide organism, *Karenia brevis* was not observed in samples collected statewide.

The Clinic for the Rehabilitation of Wildlife (CROW) on Sanibel received 1 birds with toxicosis symptoms (from red tide or blue-green algae) from 8/30/22 - 9/5/22.

Blue-Green Algae

On 9/6/22 sampling for cyanobacteria by the Lee County Environmental Lab reported the presence of *Microcystis* at the **Alva Boat Ramp**, **upstream of the Franklin Locks** and at the **Davis Boat Ramp** as sparse specks visible, and with slight accumulation along the Franklin Lock and Davis Boat Ramp seawall.

Blue-green Algae Toxin status
 Aug 11,2022 to Sep 07,2022
 (Presence/Absence)

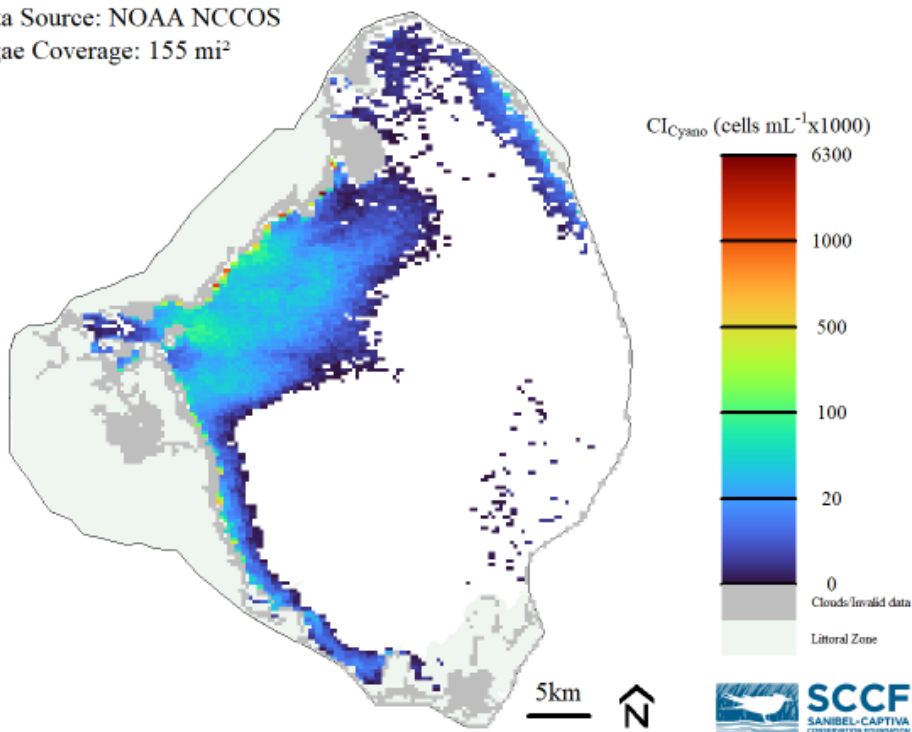

- Toxin Present
- Toxin Not Present
- No Data

Blue-green Algae sampling results for the last 30-days for the 10 county area (Lee, Collier, Hendry, Glades, Okeechobee, Martin, Palm Beach, Broward, Miami-Dade and Monroe). Data from FDEP Blue-green algae dashboard
 Data are provisional and subject to change.

Data from the [FDEP blue-green algae dashboard](#) reported 68 samples collected over the past 30 days for the 10 county area. 1 sample had toxins present.

On 9/7/22, [satellite imagery](#) from Lake Okeechobee showed low to moderate bloom potential in the northwestern area of the lake. Overall, algal blooms covered about 155 square miles (22%) of the Lake.

Date: 09-07-2022
 Data Source: NOAA NCCOS
 Algae Coverage: 155 mi²

Cyanobacteria Algal Index across Lake Okeechobee. Data from NOAA NCCOS HAB data explorer.
 Data are provisional and subject to change.

Become a Citizen Scientist and Get the Algae Reporting App Today!

SCCF wants to know when and where all types of algae sightings occur to monitor conditions around the islands and to investigate algae bloom occurrence with patterns in seasonal weather changes and Lake Okeechobee water management practices.

Download the algae reporting app on your phone by [clicking here](#) or by searching for the ArcGIS Survey123 app in the app store. Once installed, give the app permission to access your phone's location to receive GPS coordinates of your sighting and camera/media to capture and attach pictures. When you open the app, click "Continue Without Signing In."

Next, download the algae reporting survey by scanning the QR code above or [clicking here](#) on your phone. Once the survey is downloaded, fill out the required fields and click the check mark in the lower right corner to submit your sighting. Note: If you do not have cellular coverage, you can still fill out the survey and save it in the outbox to be sent later. [Click here](#) to download instructions.
